SUMMARY

Artificial Intelligence and Machine Learning student with strong skills in Python, SQL, data analytics, machine learning, and computer vision. Experienced in data preprocessing, exploratory data analysis, visualization, and developing AI/ML solutions through academic and personal projects. Strong analytical and problem-solving abilities with hands-on experience in software development and a willingness to learn and adapt to new technologies.

TECHNICAL SKILLS

Languages: Python, SQL, Java, C

Frameworks & Libraries: Pandas, NumPy, Scikit-learn, MediaPipe, OpenCV

Tools & Platforms: Git/GitHub, Power BI, Tableau, Excel, Jupyter, VS Code

Databases: MySQL, PostgreSQL, MongoDB

Concepts: Machine Learning, Deep Learning, NLP, Data Preprocessing, Exploratory Data Analysis, Data Visualization, Computer Vision, Statistical Analysis, AI/ML Model Development, REST APIs

PROJECTS

Neuro-Adaptive Closed-Loop System for Stroke Rehabilitation — Real-Time EEG & Computer Vision *April 2026-Present* – Group of 3

- Developing a real-time rehabilitation system using Python, Machine Learning, EEG Signal Processing, OpenCV, MediaPipe, and LSL Protocol for personalized stroke rehabilitation.
- Integrating EEG signals with computer vision to analyze neural activity and physical movement for adaptive exercise monitoring.
- Working toward a closed-loop system that can dynamically adjust exercise difficulty based on neural and movement responses.

MedStock AI — AI-Powered Medical Inventory & Stock Management System *March 2026*

- Built a computer vision analytics application using Python, YOLOv8, OpenCV, SQLite, Streamlit, and Tableau to extract retail insights from video feeds.
- Integrated AI-powered stock analysis and shortage prediction, along with barcode/QR scanning for efficient inventory addition, removal, and monitoring.
- Developed real-time inventory synchronization using WebSockets and implemented JWT-based authentication with interactive dashboards for visualizing stock levels and trends

Suspicious Login Detection System — Login Anomaly Detection & Risk Analysis *June 2026*

- Built a login anomaly detection system using Python, Pandas, NumPy, Scikit-learn, Matplotlib, and SQLite to identify suspicious user login activities.
- Processed and analyzed login records to detect failed-login patterns, anomalous activity, and suspicious users, using rule-based detection and Isolation Forest.
- Generated risk scores, suspicious-user outputs, and visualizations for login activity and risk distribution to support security monitoring and analysis.

Retail Analytics Dashboard — Computer Vision-Based Retail Analytics *May 2026*

- Built a computer vision analytics application using Python, YOLOv8, OpenCV, SQLite, Streamlit, and Tableau to extract retail insights from video feeds.
- Processed video data using YOLO object detection to generate visitor counts, dwell-time metrics, and customer heatmaps for retail behavior analysis.

- Developed a real-time Streamlit dashboard and Tableau business intelligence dashboard to visualize live KPIs and historical retail analytics.

EDUCATION

Bachelor of Engineering in Artificial Intelligence and Machine Learning	2023 - Present
<i>Mangalore Institute of Technology & Engineering, Mangalore — CGPA: 8.80</i>	
Senior Secondary 12th - KSEEB	2021 - 2023
<i>Percentage: 95.33%</i>	2020 - 2021
Secondary School 10th - CBSE	
<i>Percentage: 92.8%</i>	

COURSES AND WORKSHOPS

- Deloitte Cyber Job Simulation – Forage (September 2025)
- Digital Forensics Masterclass – Computer Forensics & DFIR
- Deloitte Data Analytics Job Simulation – Forage (June 2026)
- Deloitte GenAI-Powered Data Analytics Job Simulation – Forage (June 2026)
- HackerRank SQL (Intermediate) Skill Certification
- HackerRank SQL (Basic) Skill Certification
- Infosys Springboard – Python Programming Course
- Infosys Springboard – R Programming Course
- IBM SkillsBuild – Data Fundamentals (2026)
- Prompt AI Workshop – Prompt Engineering
- Mangalore DevFest 2025 – Workshop Participation

ACHIEVEMENTS & EXTRACURRICULAR

- First Prize – Women’s Leadership and Innovation Challenge 2026-Presented AI based surveillance detection and safety solution, College Level
- SAP Hackfest 2025 – Presented an AI-based gesture recognition solution to assist deaf individuals
- Bhartiya Antariksh Hackathon 2025 – Contributed to AI and space-technology problem solving.
- Prompt Wars LLM Competition – Designed and refined prompts to evaluate AI model responses.
- NXP Women in Tech (NXPWiT) 2024 Program – Participant.
- Google Student Campus Ambassador Program – Game Night – Participant.
